

Business Requirements Document — Menu (More)

Platform: Zebu Helpdesk — Staff Portal (Flutter, Android/iOS) **Module:** Menu / More **Document Version:** 2.0 (Revised Edition — supersedes 1.0) **Date:** August 2026 **Status:** Current **Classification:** Internal Use Only

Document Control

Field	Value
Document Title	Menu (More) — Business Requirements Document
Module Scope	The Menu tab: the profile header, the grouped navigation menu (Workspace and Resources), the appearance theme toggle, and sign-out. Specifies functional behaviour only — visual styling (colours, themes, animation) is out of scope.
Menu Destinations	Inbox, Agent Directory, Reports, Knowledgebase, Canned Responses, Profile . Each destination screen is specified in its own BRD (NT, AG, RP, FQ, CR, PR); this document covers only the menu entry, its visibility, and the navigation into that screen.
Audience	Quality Assurance, Product Management, Engineering
Source Truth	Flutter source at <code>lib/features/more/more_screen.dart</code> , <code>lib/models/me.dart</code> , <code>lib/core/router/routes.dart</code> , <code>lib/data/agent_directory.dart</code>

Revision history

Version	Date	Change
1.0	Aug 2026	Initial edition — MO-001 ... MO-004.
2.0	Aug 2026	Rewritten against the shipping build. MO-002 re-specified: Users, Organizations and Saved Queues are removed from the app (the web hides them from all staff), and Reports moves from Resources to Workspace. Menu entries are now permission-gated — new MO-005 (visibility rules, with the who-sees-what matrix) and MO-006 (destination map). MO-003 / MO-004 unchanged in behaviour.

Not in this module

Users (US), Organizations (OR) and Saved Queues (QU) no longer exist in the app — no screen, no route, no menu entry. Their BRDs are withdrawn; mark any residual case **Not Applicable**, not Failed. The old Reports charts screen is likewise gone — those charts now live on the **Dashboard** (`DB-005`, `DB-007`), and **Reports** is the reissued *Reports & Exports* module (RP).

5. Access & Visibility Summary

The menu is built from the signed-in agent's `GET /me` payload. Two entries are gated; everything else is visible to every signed-in agent.

Menu entry	Who can see it	Permission required	Web equivalent
Profile header → Profile	Every signed-in agent	—	Staff panel → profile
Inbox	Every signed-in agent	—	—
Agent Directory	Every signed-in agent (the *list inside* is narrowed — see MO-005)	— to open; <code>visibility.agents</code> widens the roster	<code>scp/directory.php</code>
Reports	Only agents holding <code>reports.export</code>	<code>reports.export</code> — the agent's own grant or any role they hold	<code>reports</code> tab in <code>class.nav.php</code> , <code>scp/reports.php</code>
Knowledgebase	Every signed-in agent (browsing is open; Add New Category is gated)	— to browse; <code>faq.manage</code> to add a category	<code>kbase</code> tab, <code>scp/categories.php</code>
Canned Responses	Only agents holding <code>canned.manage</code>	<code>canned.manage</code> on one of the agent's roles	<code>kbase</code> sub-nav, <code>scp/canned.php</code>
Appearance, Sign out	Every signed-in agent	—	—

Rules that apply to every gated entry

Rule	What it means for a test run
No admin bypass	The web reads the permission map directly, with no admin override, and the app matches it. An admin account without <code>reports.export</code> does not see Reports .
A hidden entry is not a defect	The gated screens are reachable only from this menu, so with the permission absent the module simply cannot be exercised. Record the account used for the run instead of raising a bug.
Nothing flickers	While <code>/me</code> is still loading, a gated entry stays hidden rather than appearing and then disappearing.
Unpublished permission = entry shown	If this install's <code>/me</code> never sends a permission code at all, the entry falls open and the backend remains the real guard. This is live today for <code>reports.export</code> : the app's bearer-token API path does not register that code, so in the current build Reports is visible to every agent . It will narrow to the matrix above with no app change once the backend publishes the code (see <code>BACKEND_FIX_reports_permission.md</code>).

6. Functional Requirements

6.1 MO-001 — Menu screen and profile header

Field	Value
Description	The Menu screen shows the agent's profile summary at the top, above the grouped menu, with a back affordance that returns to the Dashboard.

Field	Value
Acceptance Criteria	- The app bar title reads Menu; its back button (tooltip Back to Dashboard) navigates to the Dashboard tab (this is a root tab with nothing to pop) - A profile header card shows the agent's avatar with a live availability dot, the name with an ADMIN badge for admin agents, the email, and a chip row of the availability status (Available / Away / On vacation), the primary department, and the role - The department and role chips are omitted when the account has no primary department or no role name - Tapping the profile header opens the Profile screen (PR-001 onward) - While the agent profile loads, a loading view is shown in the header area; on failure an error view with Retry that re-fetches the profile - Visible to every signed-in agent; no permission is involved
Priority	High

6.2 MO-002 — Workspace and Resources menu

Field	Value
Description	The menu groups navigation destinations into a Workspace section and a Resources section.
Acceptance Criteria	- A WORKSPACE section lists, in order: Inbox (with the unread-count badge), Agent Directory, Reports - A RESOURCES section lists, in order: Knowledgebase, Canned Responses - Users, Organizations and Saved Queues do not appear in either section, for any account - The Inbox badge shows the unread notification count, is hidden when the count is zero, and reads 99+ above 99 - The badge count matches the badge on the Alerts item in the bottom navigation bar - Tapping any entry opens that feature's screen (see MO-006) - Reports and Canned Responses appear only for accounts holding the permission (see MO-005); the sections render correctly with those entries absent
Priority	High

6.3 MO-003 — Appearance theme toggle

Field	Value
Description	An inline segmented control sets the app's theme mode.
Acceptance Criteria	- An APPEARANCE section shows a segmented control with System, Light and Dark, with the current mode selected - Selecting an option changes the app's theme immediately, across every screen - The choice persists across app restarts - System follows the device's light/dark setting - Visible to every signed-in agent
Priority	Medium

6.4 MO-004 — Sign out

Field	Value
Description	A sign-out action ends the session and returns to login.

Field	Value
Acceptance Criteria	- A Sign out button is shown at the bottom of the menu - Tapping it shows a confirmation reading Sign out? with the message You will need to sign in again to continue. and a destructive Sign out confirm - Cancelling leaves the session untouched and stays on the Menu - On confirm, the session is ended and the app navigates to the Login screen, with no blank or black screen in between - After signing out, the back gesture cannot return to any in-app screen - Visible to every signed-in agent
Priority	Medium

6.5 MO-005 — Menu entry visibility by permission

Field	Value
Description	Gated menu entries appear only for accounts whose <code>GET /me</code> permissions allow the destination, mirroring the web's staff navigation. Testers must record which account each run used.
Acceptance Criteria	- Reports is shown only when the account holds <code>reports.export</code>, either as its own grant or through any role it holds; otherwise the entry is absent - Canned Responses is shown only when one of the account's roles holds <code>canned.manage</code>; otherwise the entry is absent, and cases <code>CR-001 ... CR-004</code> are unreachable by design - Inbox, Agent Directory and Knowledgebase are shown to every agent - Being an admin does not bypass a gate — an admin account lacking the permission does not see the entry, exactly as on the web - While the profile is still loading, gated entries are hidden rather than flickering into view - A permission code this install never publishes leaves its entry visible, with the backend rejecting the action if it is not truly allowed; this currently applies to <code>reports.export</code>, so Reports shows for every agent in the present build - Inside Agent Directory, an account without <code>visibility.agents</code> sees only agents from its own departments, under the note Agents in your departments; an account holding <code>visibility.agents</code> sees the full roster with no note (<code>AG-001</code>) - Inside Knowledgebase, the Add New Category action is shown only to an account holding <code>faq.manage</code>; browsing categories and articles is open to every agent (<code>FQ-001</code>)
Priority	High

6.6 MO-006 — Menu destinations

Field	Value
Description	Each menu entry opens the correct screen, and returning from it lands back on the Menu.
Acceptance Criteria	- Inbox opens the notifications screen titled Inbox — the same screen as the Alerts bottom-nav tab (<code>NT-001</code> onward) - Agent Directory opens the screen titled Agent Directory (<code>AG-001</code>, <code>AG-002</code>) - Reports opens the screen titled Reports & Exports (RP, reissued edition) — not the retired charts screen - Knowledgebase opens the screen titled Knowledgebase (<code>FQ-001</code> onward) - Canned Responses opens the screen titled Canned Responses (<code>CR-001</code> onward) - The profile header opens the screen titled Profile (<code>PR-001</code> onward) - Every destination is pushed over the Menu: its back affordance returns to the Menu with the section scroll position intact - The bottom navigation bar remains usable, and switching tabs and back preserves the Menu's state

Field	Value
Priority	High

Total: 6 cases (MO-001 ... MO-006). Supersedes version 1.0 in full.
