

# Business Requirements Document — Queues

**Platform:** Zebu Helpdesk — Staff Portal (Flutter, Android/iOS) **Module:** Saved Queues **Document Version:** 1.0 (Initial Edition)  
**Date:** August 2026 **Status:** In Progress (case-by-case) **Classification:** Internal Use Only

## Document Control

| Field          | Value                                                                                                                                                                                                                                                                                                                                     |
|----------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Document Title | Saved Queues — Business Requirements Document                                                                                                                                                                                                                                                                                             |
| Module Scope   | The Saved Queues surfaces of the Staff Portal: the <b>Saved Queues list</b> (type filter, create, rename, delete) and the <b>Queue results</b> screen that lists the tickets or tasks belonging to a saved queue. This document specifies <b>functional behaviour only</b> — visual styling (colours, themes, animation) is out of scope. |
| Audience       | Quality Assurance, Product Management, Engineering                                                                                                                                                                                                                                                                                        |
| Source Truth   | Flutter source at <code>lib/features/queues/queues_screen.dart</code> , <code>lib/features/queues/queue_results_screen.dart</code> , <code>lib/models/saved_queue.dart</code>                                                                                                                                                             |

## 6. Functional Requirements

### 6.1 QU-001 — Saved Queues list and type filter

| Field               | Value                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|---------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Description         | The Saved Queues screen lists the agent's saved ticket and task queues, filterable by type, with loading / error / empty / refresh handling and a create action.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| Acceptance Criteria | <ul style="list-style-type: none"><li>- The app bar title reads <b>Saved Queues</b></li><li>- A row of filter chips is shown: <b>All</b>, <b>Tickets</b>, <b>Tasks</b>; the selected chip filters the list to that type (All shows both), and changing the selection reloads the list</li><li>- While loading (and no prior data), a loading view is shown; on error (and no prior data) an error view with <b>retry</b> is shown</li><li>- When there are no queues, an empty state reading <b>No saved queues</b> is shown</li><li>- The list supports pull-to-refresh</li><li>- A floating action button opens the create-queue editor (QU-003)</li></ul> |
| Priority            | High                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

### 6.2 QU-002 — Queue card

| Field       | Value                                                                                                                              |
|-------------|------------------------------------------------------------------------------------------------------------------------------------|
| Description | Each queue is shown as a card summarising its type, name, visibility, and filter count, with actions available on editable queues. |
|             |                                                                                                                                    |

| Field               | Value                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|---------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Acceptance Criteria | <ul style="list-style-type: none"> <li>- Each card shows an icon indicating whether the queue is a <b>task</b> or <b>ticket</b> queue, and the queue's <b>full name</b></li> <li>- A summary line shows the queue's visibility tags (<b>Public</b> and/or <b>Personal</b>) and, when it has criteria, a "<b>N filter(s)</b>" count (singular "filter" for one); the summary is omitted when there is nothing to show</li> <li>- For an <b>editable</b> queue, a trailing overflow menu offers <b>Rename</b> and <b>Delete</b>; for a non-editable queue, a chevron is shown instead</li> <li>- Tapping a card opens that queue's results (QU-005)</li> </ul> |
| Priority            | Medium                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

### 6.3 QU-003 — Create / rename queue

| Field               | Value                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|---------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Description         | A sheet creates a new personal queue or renames an existing editable queue.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| Acceptance Criteria | <ul style="list-style-type: none"> <li>- Creating opens a sheet titled <b>New personal queue</b> with a <b>Name</b> field and an optional <b>Search filter</b> field (placeholder <b>Keyword to match</b>); the create button reads <b>Create</b></li> <li>- Renaming opens a sheet titled <b>Rename queue</b> with only a <b>Name</b> field (pre-filled); the button reads <b>Save</b></li> <li>- The button shows a busy indicator while saving; on success the sheet closes and the list reloads</li> <li>- On an API error with field errors, the name error is shown inline; a general error is shown as a toast</li> <li>- Creating with a search filter stores it as the queue's criteria; an empty filter creates a queue with no criteria</li> </ul> |
| Priority            | Medium                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

### 6.4 QU-004 — Delete queue

| Field               | Value                                                                                                                                                                                                                                                                                                                                                                                        |
|---------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Description         | Delete an editable queue.                                                                                                                                                                                                                                                                                                                                                                    |
| Acceptance Criteria | <ul style="list-style-type: none"> <li>- <b>Delete</b> shows a confirmation reading <b>Delete queue?</b> with the message <b>Delete "{queue name}"? This cannot be undone.</b> and a destructive <b>Delete</b> confirm</li> <li>- On confirm, the queue is deleted, a toast reads <b>Deleted</b>, and the list reloads</li> <li>- On failure the server error is shown as a toast</li> </ul> |
| Priority            | Medium                                                                                                                                                                                                                                                                                                                                                                                       |

### 6.5 QU-005 — Queue results

| Field               | Value                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| Description         | Tapping a queue opens a screen listing the tickets or tasks that belong to it. Ticket queues are resolved server-side by queue id; task queues replay the queue's stored criteria.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Acceptance Criteria | <ul style="list-style-type: none"> <li>- The results screen's app bar shows the queue's <b>full name</b></li> <li>- For a <b>ticket</b> queue, a paginated list of the queue's tickets is shown (resolved server-side by the queue id) using the standard ticket rows; tapping a row opens that ticket's detail</li> <li>- For a <b>task</b> queue, a paginated list of tasks is shown by replaying the queue's stored criteria as query parameters using the standard task rows; tapping a row opens that task's detail</li> <li>- An empty ticket queue shows <b>No tickets</b> with the hint <b>This queue has no matching tickets.</b>; an empty task queue shows <b>No tasks</b> with the hint <b>This queue has no matching tasks.</b></li> <li>- A loading skeleton is shown during the initial fetch</li> </ul> |
