

Business Requirements Document — Reports

Platform: Zebu Helpdesk — Staff Portal (Flutter, Android/iOS) **Module:** Reports **Document Version:** 1.0 (Initial Edition) **Date:** August 2026
Status: In Progress (case-by-case) **Classification:** Internal Use Only

Document Control

Field	Value
Document Title	Reports — Business Requirements Document
Module Scope	The Reports screen — a single scrollable surface where the agent reviews ticket volume over a chosen recent window (7 / 30 / 90 days). It covers the day-range selector, the volume summary card (Opened / Closed / Net totals and per-day averages), and the "Ticket activity" line chart of opened-vs-closed per day, plus the screen's loading / error / empty / refresh behaviour. This document specifies functional behaviour only — visual styling (colours, themes, animation) is out of scope.
Audience	Quality Assurance, Product Management, Engineering
Source Truth	Flutter source at <code>lib/features/reports/reports_screen.dart</code> , <code>lib/features/reports/widgets/{report_range_selector,report_summary_card,activity_chart_card,activity_line_chart}.dart</code> , <code>lib/models/reports.dart</code>

6. Functional Requirements

6.1 RP-001 — Reports screen: structure, data load, and states

Field	Value
Description	The Reports screen fetches a volume report for the selected day-range and shows it as a range selector followed by a summary card and an activity chart. It handles loading, error (with retry), and empty states, and supports pull-to-refresh.
Acceptance Criteria	- The screen is titled Reports - On open it fetches the volume report for the default range (30 days) and shows a centred loading indicator while the fetch is in flight - On success the body shows, top to bottom: the day-range selector (RP-002), the volume summary card (RP-003 / RP-004), and the Ticket activity chart card (RP-005) - On a fetch error, an error view with a retry action is shown (the range selector stays visible above it); retry re-attempts the fetch - When the fetch returns no report at all, an error view reading No data with retry is shown - The whole screen is vertically scrollable and supports pull-to-refresh, which re-fetches the current range - Changing the range (RP-002) triggers a fresh fetch for the new range
Priority	High

6.2 RP-002 — Day-range selector

Field	Value
Description	A dropdown at the top of the screen selects the reporting window. Changing it re-fetches the report for the new window.
Acceptance Criteria	- The selector is a dropdown offering exactly three options: Last 7 days, Last 30 days, Last 90 days - The default selection when the screen first opens is Last 30 days - Selecting a different option updates the range and immediately re-fetches the report; selecting the already-selected option does nothing - The selector stays visible in the loading, populated, and error states
Priority	High

6.3 RP-003 — Volume summary card: Opened / Closed / Net

Field	Value
Description	A summary card shows the headline volume totals for the selected window: tickets opened, tickets closed, and the net change.
Acceptance Criteria	- The card shows a title reading Last N days, where N is the window returned by the server - Three metrics are shown side by side in this order: Opened, Closed, Net - Opened shows the total opened count for the window; Closed shows the total closed count - Net shows the net value for the window; when the net is positive it is shown with a leading + (e.g. "+12"); zero or negative values are shown as-is - Counts are formatted with the app's count formatting - The three metrics are populated from the volume report's totals (opened / closed / net)
Priority	High

6.4 RP-004 — Volume summary card: per-day averages

Field	Value
Description	Below the totals, the card shows the average opened and closed per day over the window.
Acceptance Criteria	- A line reads Avg X opened · Y closed per day, where X and Y are each shown to one decimal place - X is the opened total divided by the number of days in the window; Y is the closed total divided by the number of days - The day count used as the divisor is the report's window (treated as 1 if the server reports 0 days, to avoid a divide-by-zero)
Priority	Medium

6.5 RP-005 — Ticket activity chart card

Field	Value
Description	A card shows the "Ticket activity" chart — opened vs closed per day across the window — with a title, a legend, and an empty state when there is no activity.
Acceptance Criteria	- The card shows the title Ticket activity - A legend is shown with two entries: Opened and Closed - When the report has one or more daily data points, the line chart (RP-006) is rendered plotting an Opened series and a Closed series over the window's dates - When the report's series is empty, the chart area shows the message No activity in this range instead of a chart
Priority	High

6.6 RP-006 — Activity line chart rendering

Field	Value
Description	The activity chart plots the opened and closed daily series as two lines with area fills, a labelled Y scale, gridlines, and a few X date labels.
Acceptance Criteria	- Two series are plotted — Opened and Closed — each as a line with a faint area fill beneath it, over the window's daily values - The Y axis is divided into 4 gridlines; the scale's top is rounded up to a "nice" step so the axis labels read as round numbers, and each gridline is labelled with its value - Up to four X-axis date labels are shown along the range, formatted as day + short month (e.g. "6 Jun"); the first is left-aligned, the last right-aligned, and any in between centred - For short ranges (up to 31 data points) a point dot is drawn at each day's value on each series - The chart scales to the available width and the configured height
Priority	Medium
